hic innovation review agenda

Synthetic training content. Not a real Holcim trial report.

HIC innovation review agenda (synthetic)

Meeting: HIC-LC3-24 internal innovation review
Length: 30 minutes
Decision needed today: which mixes stay in the Loire Plant plant-ready set

Agenda

1. **Purpose of the trial** (3 min)
   Can an LC3-style binder meet 42.5 MPa at 28 days at a lower clinker factor than CEM I?

2. **What the HIC files actually show** (8 min)
   Quote only M01, M12, M13, and M21 from the trial brief. Do not add mixes.

3. **Where literature disagrees or warns** (5 min)
   Early-age strength and water demand. Keep literature separate from HIC numbers.

4. **Open plant items** (7 min)
   Silos, fineness, water-demand acknowledgement, 90-day cubes still pending.

5. **Decision** (7 min)
   Keep M12 in plant-ready? Recast or drop M13? Is M21 an alternate path?

Evidence rule for every talking point

If the agenda item needs a number and the number is not in an HIC file, write **Needs data**. Do not borrow a literature range to look prepared.
